Strategy Details

Strategy Fee (ex. VAT):	Management Fee - 0.25% Performance Fee - 0%
Benchmark:	Asisa Multi Assets High Equity Average

Investment Objective

The portfolio aims to provide a return in excess of the multi-asset high equity sector average and is suitable for investors that are seeking high levels of capital growth and limited income, with a lower volatility and capital risk than a full equity income portfolio. This is a subjective market house view research report of Fibonacci based on back tested risk and performance results. Figures shown are based on real data.

Investment Policy

The portfolio invests in unit trusts and maintains an overall medium to high risk profile with the expected equity exposure ranges between 55% and 75% of its net asset value, whilst its property exposure ranges between 0% and 25% of its net asset value. In order to achieve its objective, the underlying managers investments normally included in their portfolio may comprise a combination of assets in liquid form, money market instruments, interest-bearing securities, bonds, debentures, corporate debt, equity securities, other interest-bearing securities, property securities, preference shares, convertible equities and non-equity securities. The underlying managers may invest in participatory interests or any other form of participation in portfolios of collective investment schemes or other similar collective investment schemes as the Act may allow from time to time, and which are consistent with the portfolio's investment policy.

Investment Policy

Low	Low-Medium	Medium	Med-High	High
-----	------------	--------	-----------------	------

The portfolio is likely to suit investors that are looking for:

- Investment returns that compromise of high capital growth with some income
- Actively managed exposure to a variety of asset classes
- Where the asset allocation reflects offshore and equity exposure, the portfolio is exposed to currency and equity risks.
- The portfolio is exposed to default and interest rate risks.

The portfolio is unlikely to be ideally suited to investors with a time horizon less than 5-7 years or investors that are uncomfortable with investment value fluctuations over the short term.

Therefore, it is suitable for long-term. The expected potential long-term investment returns are lower but less volatile over the medium to long term than pure equity portfolios.

Net Returns to Investors

	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	Total
2019			2,32%	2,05%	-2,18%	1,35%	0,20%	1,25%	0,23%	1,56%	-0,63%	0,64%	6,78%

Indicative Asset Allocation

Prescience Aggressive Strategy

Strategy Risk

Certain investments: Including those involving futures, options, equity swaps, and other derivatives may give rise to substantial risk and might not be suitable for all investors. Where foreign securities are included in the portfolio there may be additional risks such as potential constraints on liquidity and repatriation of funds, macroeconomic risk, political risk, foreign exchange risk, tax risk, settlement risk as well as potential limitations on the availability of market information.

Strategy Risk

Net Asset Value (NAV): Means net asset value, which is the total market value of all assets in a portfolio including any income accruals and less and deductible expenses such as audit fees, brokerage and service fees.

Annualised Return: Is the weighted average compound growth rate over the performance period measured.

Highest & Lowest Monthly Return: The highest and lowest rolling twelve-month performance of the portfolio since inception.

Standard Deviation: The deviation of the return of the portfolio relative to its average.

Draw-down: The greatest peak to trough loss until a new peak is reached.

MTD: Month to date return.
